

Trio v2 Office Review

Source-backed artifact readiness

Review scope

The office capability covers documents, spreadsheets, presentations, and PDF review using Host-native tools and local task facts.

Evidence required

Confirm source or data basis, formulas or citations, native open or parse results, rendered layout, and accessibility findings before completion.

Authority boundary

The planning Trio is the sole durable task authority. Worker completion is a candidate; Chief acceptance and Trio writeback remain explicit.

External gate

Send, publish, share, upload, and other external effects require supported Host capability plus the applicable human gate.

Citation: Wave 5 Exact Proof Matrix (local task facts).

Accessibility: searchable text, readable contrast, heading hierarchy, and rendered-page inspection.

Generated artifact is a candidate until independent verification and Chief acceptance.
